technical precision**

Preformed lingerie of synthetic and cotton

Thermally preformed bras are better than sewed ones. And cost less.

Using thermal forming to produce bras cost less than sewing, and improves their quality.

Moulded (thermally formed) bras feel like a second skin for a woman. No visible seams, no applications, no scratching threads. By fixing out the bra material at the breast top the desired hold and support function are guaranteed. The material elasticity on the sides is being kept and gives the braest a good form but does not compress. The cups mould perfectly to the body.

Thermal forming is of advantage for all bras: with or without bows, for bustiers, bras without straps, or functional bras.

Beauty needs

Moulding of day and night wear for woman. Exactly as instructed.

Mayser forms different textile materials for the European lingerie industry for more than 30 years.

Following precisely processing instructions and especially keeping delivery deadlines is speaking for Mayser. Numerous special developments have been created due to a continuous dialogue with the customers.

Mayser have own forming construction for spherical and functional forms so that elastic and non-elastic hosiery and knitting can be formed.

Complete complexity. Nothing is missing.

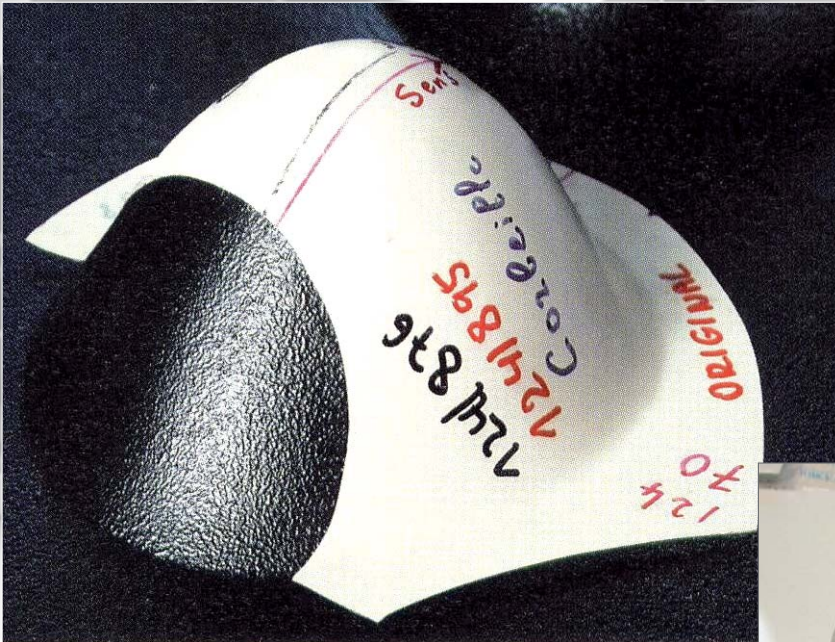

200 mould forms for brassières and ladies' lingerie reaching up to size 150 B best present the large range Mayser can cover. As Mayser manufactures forms and tools all on its own, it is possible to quickly create special forms that meet with its customers' specifications. Mayser's technique and know-how guarantees forms of highest precision.

Mayser forming technology makes it possible to form lingerie, body stockings, shirts, bustiers, bandeaux, swim wear including bikinis, swim wear cups, maternity bras, post mastectomy (prosthetic bags, prosthetic bras), embroidery bras, bordering bras, sports bras, and day and night wear.

Cut foam bodies are used in the medical fields and for push-ups.

Mayser is certified by DIN EN ISO 9001.

Unique three-dimensional cutting technique: Contour stamping and contour cutting.

With the exactness of +/- 2 mm Mayser has a unique cutting technique in this branch for three-dimensional contour cutting. If the contours of a model are outside the formed area, contour stamping is used. Are the contours completely or partially within the formed area contour cutting with the well-known Mayser precision is being used.

Our customers can order any cutting line. We make this possible because we have our own foundry and can therefore produce any kind of form.

Thermally formed bras made of 100 % pur cotton. Ecological: free of formaldehyde.

Mayser cannot only process 100 % synthetic but was the first to form cups made of 100 % cotton. Their form stability stays the same even after many washes. Mayser can also mould mixtures such as cotton/ polyamide.

Mayser produces an absolute ecological forming of cotton wear with formaldehyde-free processes. Mayser has developed their own recipes for cotton cups and their mixtures, and created specialized equipment.

Mayser offers different mouldable cotton qualities. The body heat compensates the shrinkage that is caused by washing.
